Role: Scrum Master

Responsibilities:

- Facilitate daily scrum, sprint planning, sprint demo, and retrospective meetings.
- Use velocity to predict the number of user stories that can be delivered within the Sprint.
- Be an expert in estimation and planning – story point being his best friend.
- Define customer experience, educate team and deliver to the customer.
- Be a retrospective ninja, almost a developer whisperer, to point out core issues within the team.
- Use the concept of 5 Whys to do the root cause analysis of the problem.
- Bring positive energy within the team to ensure everyone feels comfortable and enjoys work.
- Identify impediments within the team (again use 5 whys) and be an impediment terminator to help increase team's speed.
- Build a trusting and safe environment where problems can be raised without fear, be a listener and a problem-solver.
- Support and educate the Product Owner, especially with respect to refining (aka grooming) and managing the product backlog.
- Understand budgets, project costs, resource planning to deliver projects within a given cost and time.
- Be part of the Scrum Master online community on Facebook and add and receive value from there.
- Contribute 1 blog each month on Agile process, learnings, story about your own retrospective, team on company's website.
- If you decide to apply for this job, think what can you bring to the company in order to be aligned with company values

Skills required:

- Experience in Jira.
- Experience in working in an Agile environment.
- Certifications in Scrum preferred.
- Understanding of what we do and why.
